CIRRASCALE® SELECTED BY UNICOM GOVERNMENT AS SUPPLIER OF TAILORED SCALE UP AND SCALE OUT SOLUTIONS FOR SEWP V CONTRACT

Cirrascale extends its partnership with UNICOM Government as a supplier of tailored rackmount and blade-based multi-device, scalable solutions for unique government application types.

San Diego, Calif. -- May 14, 2015 -- Cirrascale Corporation®, a premier developer of build-to-order, open architecture blade-based and rackmount computing infrastructure, today announced its partnership with UNICOM Government Incorporated (UGI) to help expand its solutions and capabilities being provided to the National Aeronautics and Space Administration (NASA) Goddard Space Flight Center (GSFC) for the Solution for Enterprise-Wide Procurement V (SEWP V) contract.

“Cirrascale is excited to be working closely with UNICOM Government to bring a new approach to handling the increasing high performance computing requirements of federal, state and local government agencies,” said David Driggers, CEO, Cirrascale Corporation. “Our partnership enables us to collaborate on the development of tailored, built-to-order solutions at commodity prices so that these organizations can maximize their overall cost savings in regards to performance per dollar.”

UNICOM Government received contract awards under Category A, Scalable Computer System Group and, Category D, Network Devices, Computer Security Tools and Advanced Video Conference Tools, which expands UGI's fulfillment capabilities from its previous award under the predecessor contract, SEWP IV. UGI has held one or more NASA SEWP contracts continuously since the first SEWP contract was awarded in 1991. Cirrascale has been selected as a key partner in helping to address new high performance computing solutions for modeling, simulations, computations, virtualization and storage under Category A of the new contract.

“Partnering with Cirrascale has allowed UNICOM Government to offer a unique build to order solution for the SEWP V contract which allows users to implement tailored, integrated solutions with significant computing density while enabling platform and vendor independence,” said Don Upson, Chief Operations Officer of UNICOM Global. “It is a true computing infrastructure that can grow and scale over time, not a box solution that will require ‘forklift’ upgrades as technology changes.”

About UNICOM Government

UNICOM Government is a leading provider of technology solutions and professional services to federal, state and local governments. Founded in 1983, the company has helped meet the unique IT needs of more than 1,700 governmental agencies worldwide. UNICOM Government and its professionals draw on their deep knowledge, strategic partnerships, customer service and numerous industry certifications to guide agencies in selecting the most cost-effective technology available. With extensive capabilities and past performance in software development, data center, networking, collaboration, security and cloud computing solutions, as well as with advance engineering, integration, support and financial services – and broad portfolio contacts – UNICOM Government eases the planning, purchasing and deployment of IT solutions and facilitates the management of mission-critical IT throughout the lifecycle.

About Cirrascale Corporation

Cirrascale Corporation is a premier provider of custom rackmount and blade server solutions developed and engineered for today's conventional data centers. Cirrascale leverages its patented Vertical Cooling Technology, engineering resources, and intellectual property to provide the industry's most energy-efficient standards-based platforms with the lowest possible total cost of ownership in the densest form factor. Cirrascale sells to large-scale infrastructure operators, hosting and managed services providers, cloud service providers, government, higher education, and HPC users. Cirrascale also licenses its award winning technology to partners globally.
